PROJECT & INTERNSHIP

Project Summary: Audio to Sign Language Tool

Developed an innovative web-based Audio to Sign Language Tool aimed at breaking down communication barriers for the deaf and hard of hearing. This platform seamlessly converts spoken language into sign language animations using advanced technologies such as Natural Language Processing (NLP), speech recognition, and animation tools like Blender.

Key Features:

- Speech Recognition: Converts audio input into text.
- NLP: Processes the text to ensure accurate sign language translation.
- Animation Tools: Utilizes Blender for creating lifelike sign language animations.
- User-Friendly Interface: Allows users to input audio and instantly view sign language animations.
- Feedback Mechanism: Enables users to provide feedback, improving accuracy and engagement.
